

## Start Semiconductor Test Equipment Sales for Overseas Markets

Shikino High-Tech Co., Ltd. (hereafter, Shikino) began its Uozu 2nd Plant (Uozu City, Toyama Prefecture) operation in May 2023, enhancing the development and work area of semiconductor test equipment to approximately triple the production and supply capacity. This time, in order to expand overseas sales as further growth, we launched a new lineup of Burn-In System: SHSB-2000 overseas version, which is the mainstay of semiconductor test equipment, and began full-scale sales.

Shikino's Burn-In System has been sold mainly to domestic customers up until now. However, we have developed products for overseas markets, promoted the globalization of our products, and began selling to overseas customers. In ASEAN regions, we will strengthen local support by collaborating with multiple local partners. In order to meet the needs of overseas customers, we will continue to develop test equipment other than SHSB-2000 that we released this time.

Starting with the delivery to a major customer in Taiwan in September 2024, we plan to gradually ship out test equipment to other ASEAN regions where there are many leading semiconductor-related companies both of domestic and overseas. We will continue to strengthen business activities to increase the ratio of overseas sales.
