## Shikino High-Tech and CAST Form Partnership to Provide Silicon IP and Expand Market Reach

Shikino High-Tech Co., Ltd. and CAST, a leading provider of silicon intellectual property (IP) solutions announced a new strategic partnership aiming at expanding both companies' reach and offerings in the global semiconductor market.

Under the partnership, CAST will promote and make available Shikino High-Tech's IP cores worldwide, beginning with imaging and compression technologies such as JPEG-XL and potentially expanding into additional areas in the future.

At the same time, Shikino High-Tech will act as CAST's representative in Japan, helping to bring CAST's silicon-proven IP cores to a broader range of Japanese customers

### **Comment from Nikos Zervas, CEO of CAST:**

" We are excited to partner with Shikino High-Tech, whose sterling reputation and strong connections in the Japanese industry will help even more Japanese firms benefit from the Better IP Experience that comes with IP cores from CAST. We are also honored to work with Shikino High-Tech to offer their world-class imaging and compression technology to the global marketplace as part of the proven CAST IP cores product portfolio."

### **.Comment from Shinichi Takahashi, Senior Managing Director at Shikino High-Tech:**

" We are honored to partner with CAST, which holds a diverse range of IPs and operates in the global market. We look forward to expanding both our businesses through this partnership.",

### **【Details of the Partnership and Future Outlook】**

Representation of CAST in Japan by Shikino High-Tech and addition of Shikino-Developed products to CAST's IP offerings begins later next quarter. (Email CAST Sales for early information.)

### **About Computer Aided Software Technologies, Inc.:**

Computer Aided Software Technologies, Inc. (CAST) is a silicon IP provider founded in 1993. The company's ASIC and FPGA IP product line includes microcontrollers and processors; compression engines for data, images, and video; interfaces for automotive, aerospace, and other applications; various common peripheral devices; and comprehensive SoC security modules.
